## 2 About this document

Please read this chapter carefully before working with this documentation and the Leuze IO-Link device.

### 2.1 Purpose of use

These instructions have been designed for the technical personnel for the use of the IO-Link PLC blocks.

These instructions are intended to provide support during the commissioning of a Leuze IO-Link sensor using standard software from Siemens. The described module is part of this standard software.

### 2.2 Target group

These instructions are addressed to programming engineers and the operators of machines and systems, which are operated by one or several IO-Link devices. They also address people, who connect the IO-Link device via an IO-Link Master-Gateway to a PLC-Control for data exchange.

# 3 General use of function block

## 3.1 Short description

The function block "FB\_Leuze\_IOL\_ HT110\_2173" simplifies the usage of Leuze IO-Link devices on Beckhoff (TwinCAT 3.x) PLC controls. This FB supports IO-Link Masters which can be connected via EtherCAT to the PLC system.

The function block is device type-specific and thus only suitable for the appropriate Leuze IO-Link devices. The FB interprets the call-up of the acyclic service data between the PLC and the IO-Link device.

The IO-Link function block can only be used in combination with the listed helper functions / libraries.

## 3.2 Calling and designation

Fig. 3.1: Example of module call

## 3.3 Configuration

Tab. 3.1: Parameter IN

| Parameter | Data type  | Description   |
|-----------|------------|---|
| bExecute  | Bool       | Positive trigger: Start data transfer   |
| bRW       | Bool       | Read or write the selected IO-Link parameter.<br>FALSE: Read parameter<br>TRUE: Write Parameter   |
| nPort     | T_AmsPort  | Port number of the ADS device.  |
| sNetId    | T_AmsNetID | String containing the AMS network identifier of the target device to which the ADS command is directed.<br>Beckhoff EL6224/EP6224: AoeNetId of the IO-Link Master |
| nIdxGroup | UDInt      | Index group number.   |
| tTimeOut  | Time       | Time, after a Timeout-Error is triggered.   |

Tab. 3.2: Parameter INOUT

| Parameter    | Data type                | Description |
|--------------|--------------------------|-------------|
| stDeviceData | ST_Leuze_IOL_ HT110_2173 | Sensor data |

See structure description of ST\_Leuze\_IOL\_ HT110\_2173 in chapter 7.

Tab. 3.3: Parameter OUT

| Parameter | Data type | Description                      |
|-----------|-----------|----------------------------------|
| bDone     | Bool      | Indicates whether data is valid. |

| Parameter   | Data type          | Description   |
|-------------|--------------------|---|
| bBusy       | Bool               | Request in process.<br>FALSE: Request is terminated<br>TRUE: Request is being processed |
| bError      | Bool               | Error flag<br>FALSE: No error<br>TRUE: Error detected                                   |
| stErrorCode | ST_Leuze_IOL_Error | Status of the function block  |

See structure description of ST\_Leuze\_IOL\_Error in chapter 6.

## 3.4 Method of function

The function block uses the data structure "ST\_Leuze\_IOL\_Home\_2173". The PLC data structure contains the values of all IO-Link variables. Before you can use it, the structure must be instantiated by a data block. Each IO-Link FB parameter has a data point representing it in this data structure. This data point will be actualized every time a read request was executed successfully.

The desired parameters can be selected via the input variables. Depending on the device definition, IO-Link parameters are read or writable. The input variable must be "bRW" = FALSE to read parameter. The value that should be written can be defined in the data structure, as soon as the input parameter "bRW" = TRUE. You start each transfer by calling up the "FB\_Leuze\_IOL\_Home\_2173" with a positive trigger at the "bExecute" input. As long as there is no valid answer the output "bBusy" is TRUE. In the case that the chosen timeout period has elapsed a timeout error will be generated and the thread will be terminated. The "bDone" = TRUE output shows that the transmission was successful. The outputs retain their states as long as there is no new positive trigger at the "bExecute" input again.

The function block allows you to read or write multiple IO-Link parameters sequentially (multi-selection). Please note that it may happen, that a single parameter can not be written. The function block aborts at this point and it is possible, that the IO-Link device contains an inconsistent set of parameters.

## 3.5 Behavior when error occurs

An error bit (bError) is set and an error code (ST\_Leuze\_IOL\_Error) generated, if there is a spurious input value or an incorrect input connection of the FB. In this case, no further processing is carried out, until the input has been corrected.

## 4 Integration into the PLC project

The function block "FB\_Leuze\_IOL\_ HT110\_2173" is a part of the TwinCAT V3.x library. The library can be installed by using the Library Repository. Afterwards the library can be added to your project (References --> Add library...).

### Integration step by step:

- Download the library
- Open the Library repository in Library Manager tab in Beckhoff TwinCAT
- Click Install... and select downloaded library
- Open Add library in Library Manager tab
- Find installed library under Leuze electronic GmbH + Co. KG

| <b>NOTICE</b>   |  |
|---|--|
|  | If several devices connect to the IO-Link Master, you can only exchange acyclic data (service data) with one device at the same time. Due this restriction, the service data communication blocks must to be blocked against each other. |

## 5 Process data parser function

The function F\_Leuze\_PD\_ HT110\_2173 simplifies the interpretation of composed IO-Link process data. This data is provided as a data structure on the PLC side. Some sensors supports different process data output. User must select mode of PD according to the sensors settings.

The function is device type-specific and thus only suitable for the appropriated Leuze IO-Link devices.

### 5.1 Calling and designation

Fig. 5.1: Example of process data parsing function call

### 5.2 Configuration

Tab. 5.1: Parameters

| Parameter name | Declaration | Data type               | Description   |
|----------------|-------------|-------------------------|---|
| aProcessData   | INPUT       | ARRAY OF BYTE           | Raw process data of the IO-Link device.   |
| nPDMode        | INPUT       | INT                     | Mode of the PD. User must select mode of PD according to the sensors settings.  |
| bError         | OUTPUT      | BOOL                    | Error flag<br>FALSE: No error<br>TRUE: Error detected   |
| F_Leuze_PD_    | OUTPUT      | ST_Leuze_PD_ HT110_2173 | Reference to the instance of the data structure ST_Leuze_PD_ HT110_2173. The structure includes the disaggregated values of the process data. |
| HT110_2173     |             |                         |   |

See structure description of ST\_Leuze\_PD\_ HT110\_2173 in chapter 7.

## 6 Error description

The parameter "ErrorCode" can be interpreted using the PLC data type ST\_Leuze\_IOL\_Error. This data type contains the following error information:

Tab. 6.1: ST\_Leuze\_IOL\_Error description

| Parameter name             | Data type | Description                                       |
|----------------------------|-----------|---|
| ErrorStatus.nBlockError    | WORD      | Error number representing FB where error occurred |
| ErrorStatus.nAdsReadError  | UDINT     | ADS read error code                               |
| ErrorStatus.nAdsWriteError | UDINT     | ADS write error code                              |
| ErrorStatus.nIndex         | INT       | IO-Link index to which the error code refers      |
| ErrorStatus.nSubIndex      | INT       | IO-Link sub-index to which the error code refers  |

Tab. 6.2: Error description for nBlockError

| Error code (nBlockError) | Error description                        |
|--------------------------|--|
| 0x0000                   | No error                                 |
| 0x8001                   | Time out error occurred                  |
| 0x8002                   | No parameter selected                    |
| 0x8003                   | Error in FB_Leuze_IOL_AdsReadWrite block |

For additional information see the Beckhoff ADS Return Codes (<https://infosys.beckhoff.com>).

# 7 Data structures

Tab. 7.1: ST\_Leuze\_IOL\_Home\_2173

| Parameter name   | Data type | Description   |
|--|-----------|---|
| stDeviceData.stSelection.stCommands.bDeviceReset                             | BOOL      | [WRITE_ONLY] Device Reset                                     |
| stDeviceData.stSelection.stCommands.bApplicationReset                        | BOOL      | [WRITE_ONLY] Application Reset                                |
| stDeviceData.stSelection.stCommands.bRestoreFactorySettings                  | BOOL      | [WRITE_ONLY] Restore Factory Settings                         |
| stDeviceData.stSelection.stCommands.bEmitterOff                              | BOOL      | [WRITE_ONLY] Emitter OFF                                      |
| stDeviceData.stSelection.stCommands.bEmitterOn                               | BOOL      | [WRITE_ONLY] Emitter ON                                       |
| stDeviceData.stSelection.stCommands.bResetSwitchingChannel                   | BOOL      | [WRITE_ONLY] Reset switching-channel                          |
| stDeviceData.stSelection.stCommands.bDetectSensor                            | BOOL      | [WRITE_ONLY] Detect Sensor                                    |
| stDeviceData.stSelection.stCommands.bTeachApply                              | BOOL      | [WRITE_ONLY] Teach Apply                                      |
| stDeviceData.stSelection.stCommands.bSingleValueTeachSwitchpoint1            | BOOL      | [WRITE_ONLY] Single value teach - switchpoint 1               |
| stDeviceData.stSelection.stCommands.bSingleValueTeachSwitchpoint2            | BOOL      | [WRITE_ONLY] Single value teach - switchpoint 2               |
| stDeviceData.stSelection.stCommands.bTwoValueTeachTeachpoint1ForSwitchpoint1 | BOOL      | [WRITE_ONLY] Two value teach - teachpoint 1 for switchpoint 1 |
| stDeviceData.stSelection.stCommands.bTwoValueTeachTeachpoint2ForSwitchpoint1 | BOOL      | [WRITE_ONLY] Two value teach - teachpoint 2 for switchpoint 1 |
| stDeviceData.stSelection.stCommands.bTwoValueTeachTeachpoint1ForSwitchpoint2 | BOOL      | [WRITE_ONLY] Two value teach - teachpoint 1 for switchpoint 2 |
| stDeviceData.stSelection.stCommands.bTwoValueTeachTeachpoint2ForSwitchpoint2 | BOOL      | [WRITE_ONLY] Two value teach - teachpoint 2 for switchpoint 2 |
| stDeviceData.stSelection.stCommands.bDynamicTeachSwitchpoint1Start           | BOOL      | [WRITE_ONLY] Dynamic teach - switchpoint 1 - start            |
| stDeviceData.stSelection.stCommands.bDynamicTeachSwitchpoint1Stop            | BOOL      | [WRITE_ONLY] Dynamic teach - switchpoint 1 - stop             |
| stDeviceData.stSelection.stCommands.bDynamicTeachSwitchpoint2Start           | BOOL      | [WRITE_ONLY] Dynamic teach - switchpoint 2 - start            |
| stDeviceData.stSelection.stCommands.bDynamicTeachSwitchpoint2Stop            | BOOL      | [WRITE_ONLY] Dynamic teach - switchpoint 2 - stop             |
| stDeviceData.stSelection.stCommands.bTeachInCancel                           | BOOL      | [WRITE_ONLY] Teach-in cancel                                  |
| stDeviceData.stSelection.stDirectParameters1.bAll                            | BOOL      | [READ_WRITE] all parameters of complex data type              |
| stDeviceData.stSelection.stDirectParameters1.bAll                            | BOOL      | [READ_WRITE] all parameters of complex data type              |
| stDeviceData.stSelection.stDirectParameters1.bReserved_1                     | BOOL      | [READ_ONLY]   |

| <b>Parameter name</b>   | <b>Data type</b> | <b>Description</b>                               |
