

Barcode tape 0 m to 10000 m for BPS 34/37 barcode positioning system

Usage note:

Each file contains all code information for a section of tape that is 500 metres long.
1 metre of barcode tape is provided on each A4 sheet. Each metre is divided into 5 lines of 20cm, each with 5 code segments of information covering lengths of 4cm each.

Important note for printing:

- 1: Select only those pages that are actually required.
- 2: Change the printer settings so that the code is not distorted. Suggestion for printer settings, see figure 1.
- 3: Verify the printing result by measuring the distance between two codes (see figure 2).
- 4: Cut the code strips and concatenate them. It is important that the code content always increases or decreases in blocks of 4 cm.
