1 IO-Link interface

Sensors in the DMU218 variant have a IO-Link interface. Available on pin 4 is the IO-Link interface in accordance with specification 1.1.2 (July 2013) with support of Smart Sensor Profile 1.0 (October 2011). You can easily, quickly and economically configure the devices via the IO-Link interface. Furthermore, the sensor transmits the process data via the IO-Link interface and makes diagnostic information available through it.

1.1 IO-Link identification

| VendorID dec/hex | DeviceID dec/hex | Device |
|------------------|------------------|--------------------|
| 338/0x152 | 3089/0x000C11 | DMU218-800/LA-M12 |
| | 3090/0x000C12 | DMU218-800/LV-M12 |
| | 3091/0x000C13 | DMU218-1500/LA-M12 |
| | 3092/0x000C14 | DMU218-1500/LV-M12 |

Please refer to the respective product data sheet for the identification data of other IO-Link devices.

1.2 IO-Link process data

Device output data (PDI - 32-bit data length)

| Bit offset | Data width in bits | Assignment | Meaning |
|------------|--------------------|----------------|---|
| 4 | 12 | Measured value | Current measurement value Value range 0...1000 (Device ID 3089 & 3090) Value range 0...1800 (Device ID 3091 & 3092) |
| 0 | 1 | BDC1, Q1 | Switching state (BDC1, Q1) Value range 0...1 |

| Byte 0 | Measured value | | | | | | | |
|--------|----------------|---|---|---|---|---|---|---|
| | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 |

| Byte 1 | Measured value | | | | | x | x | x | BDC1, Q1 |
|--------|----------------|---|---|---|---|---|---|---|----------|
| | 7 | 6 | 5 | 4 | 3 | 2 | 1 | 0 | |

1.3 Device-specific IODD

At www.leuze.com in the download area for IO-Link sensors you will find the IODD zip file with all files required for the installation.

On the IODDfinder platform (<https://ioddfinder.io-link.com/>), a central cross-manufacturer database, you can also find the description files (IODDs) of the IO-Link sensors.

1.4 IO-Link parameters documentation

The complete description of the IO-Link parameters can be found in the *.html files. Double-click on a language variant in the directory containing the extracted files:

- German: *IODD*-de.html
- English: *IODD*-en.html

If the html file within the ZIP archive is opened, the image files are not displayed.

☞ Extract the ZIP file first.

1.5 Device-specific information

- This is a device with the Data Storage function, i.e., device exchange is possible without additional measures (such as teaching).
- In the PREOPERATE state, this device uses TYPE_1_V with 8 octets of on-request data.
- The system commands "Stop measurement" and "Single measurement" cause the process data to be marked as invalid. The system command "Start measurement" causes the process data to return to the valid state.

Fundamentals:

- IO-Link Interface and System Specification Version 1.1.2, July 2013
- IO-Link Test Specification Version 1.1.2 July 2014

2 Functions configurable via IO-Link

PC configuration and visualization is performed comfortably with the USB-IO-Link Master SET MD12-US2-IL1.1 (part no. 50121098) and the *Sensor Studio* configuration software (in the download area of the sensor at www.leuze.com).

System commands

| NOTICE | | | | | | | |
|--|--------|-----------|-------------------|---------|---|----------|---|
|  The system commands trigger an action in the device. | | | | | | | |
| Parameter | In-dex | Sub-index | Data type, octets | Ac-cess | Value range | De-fault | Explanation |
| System command | 2 | 0 | UIntegerT, 1 | WO | 64, 65, 66, 67, 68, 69, 70, 71, 72, 73, 74, 79, 130, 161, 162, 163, 164, 165, 166 | | 64: Apply teach 65: Switching point 1, single-value teach 66: Switching point 2, single-value teach 67: Two-value teach TP1 SP1 68: Two-value teach TP2 SP1 69: Two-value teach TP1 SP2 70: Two-value teach TP2 SP2 71: Switching point 1, dynamic teach start 72: Switching point 1, dynamic teach stop 73: Switching point 2, dynamic teach start 74: Switching point 2, dynamic teach stop 79: Cancel teach 130: Set factory defaults 161: Set lower analog limit 162: Set upper analog limit 163: Reset diagnostic information 164: Stop measurement 165: Start measurement 166: Single measurement |

General configuration

| Parame- ter | Index | Sub- index | Data type, octets | Ac- cess | Value range | De- fault | Explanation |
|--------------------------|-------|---------------|-------------------------|-------------|----------------|--------------|--|
| Device access locks | 12 | 0 | UInte- gerT, 2 | RW | 0, 1 | 0 | 0: Parameter write access not disabled 1: Parameter write access disabled |
| Application specific tag | 24 | 0 | String, max. 32 | RW | | *** | Application-specific marking |

| Parameter | Index | Sub-index | Data type, octets | Access | Value range | Default | Explanation |
|----------------------------|-------|-----------|-------------------|--------|------------------------------|---------|---|
| Teach status | 59 | 3 | UIntegerT, 4 bit | RO | 0, 1, 2, 3, 4, 5, 6, 7 | | Status of teach event: 0: Inactive 1: Switching point set 2: Switching point 2 set 3: Switching point 1 and 2 set 4: Waiting for command 5: Active 6: Reserved 7: Error |
| BDC1 setpoints | 60 | 1 | UIntegerT, 2 | RW | 80 ... 800 | 80 | Numerical input of switching point SP1 (Device ID 3089 & 3090) |
| | | 2 | UIntegerT, 2 | RW | 80 ... 800 | 800 | Numerical input of switching point SP2 (Device ID 3089 & 3090) |
| BDC1 setpoints | 60 | 1 | UIntegerT, 2 | RW | 150 ... 1500 | 150 | Numerical input of switching point SP1 (Device ID 3091 & 3092) |
| | | 2 | UIntegerT, 2 | RW | 150 ... 1500 | 1500 | Numerical input of switching point SP2 (Device ID 3091 & 3092) |
| BDC1 configuration | 61 | 1 | UIntegerT, 1 | RW | 0, 1 | 0 | Logic: 0: NO 1: NC |
| | | 2 | UIntegerT, 1 | RW | 0, 1, 2, 3, 128 | 2 | Operating mode: 0: Deactivated 1: Switching point mode 2: Window mode 3: Two-point mode 128: Reflex mode |
| | | 3 | UIntegerT, 2 | RW | 2 ... 20 | 2 | Determines the hysteresis at the switching point. A higher hysteresis can help increase the stability in critical applications. |
| On delay switching output | 66 | 0 | UIntegerT, 2 | RW | 0 ... 10000 | 0 | Switch-on delay of switching output in ms |
| Off delay switching output | 67 | 0 | UIntegerT, 2 | RW | 0 ... 10000 | 0 | Switch-off delay of switching output in ms |
| Multi I/O (pin 4) | 70 | 0 | UIntegerT, 1 | RW | 0, 1, 2, 3, 4, 5 | 0 | Switching output polarity 0: PP 1: NPN 2: PNP 3: Teach-in analog output 4: Synchronization 5: Multiplex |

| Parameter | Index | Sub-index | Data type, octets | Access | Value range | De-fault | Explanation |
|--------------------------|--------------|------------------|--------------------------|---------------|--------------------|-----------------|--|
| Multi I/O (pin 2) | 71 | 0 | UIntegerT, 1 | RW | 0, 1, 2, 3 | 2 | Operating mode for multi I/O (pin 2): (Only valid for Device ID 3089 & 3091) 0: Deactivated 1: 0 ... 20 mA 2: 4 ... 20 mA 3: 0 ... 10 V |
| Analog range | 72 | 1 | UIntegerT, 2 | RW | 80 ... 800 | 80 | Lower limit (Device ID 3089 & 3090) |
| | | 2 | UIntegerT, 2 | RW | 80 ... 800 | 800 | Upper limit (Device ID 3089 & 3090) |
| Analog range | 72 | 1 | UIntegerT, 2 | RW | 150 ... 1500 | 150 | Lower limit (Device ID 3091 & 3092) |
| | | 2 | UIntegerT, 2 | RW | 150 ... 1500 | 1500 | Upper limit (Device ID 3091 & 3092) |
| Temperature compensation | 74 | 1 | UIntegerT, 1 | RW | 0, 1 | 0 | Temperature compensation 0: Off 1: On |
| SP1 teach point | 80 | 1 | UIntegerT, 2 | RO | | | Lower limit for teach – TP1 |
| | | 2 | UIntegerT, 2 | RO | | | Upper limit for teach – TP2 |
| SP2 teach point | 81 | 1 | UIntegerT, 2 | RO | | | Lower limit for teach – TP1 |
| | | 2 | UIntegerT, 2 | RO | | | Upper limit for teach – TP2 |
| Switch counter | 85 | 0 | UIntegerT, 4 | RO | | 0 | Switching events after switch-on or reset. Can be reset with system command 163 – Reset diagnostic information. |
| Temperature internal | 86 | 0 | UIntegerT, 2 | RO | | | Internal device temperature |
| Network | 88 | 1 | UIntegerT, 1 | RO | 0, 1 | 0 | Role in network: 0: Master 1: Slave |
| | | 2 | UIntegerT, 1 | RO | 0 ... 10 | 1 | Device no. (Master highest number) |
