## 1 About the LSIS 122 and LSIS 123

There are 2 Versions of the **Leuze Smart Image Sensor 120**:

- **LSIS 122**
- **LSIS 123**

Both Devices have the same housing and the same M12 8-pin connector, with an Triggerinput and an Switch output.

The LSIS 122 have an RS 232-Interface and a 24 VDC voltage supply:

The LSIS 123 communicates over the USB-Interface, this interface does also the Voltage supply with 5 VDC:

There are two Modes on the LSIS 123 with the USB-Interface:

1. **Keyboard Wedge Mode** (Keyboard-Emulation) at a PC with the Windows-owned HID-Driver (Factory Default)
2. **Serial COM-Port Emulation**, a virtual serial COM-Interface.

For both we need USB-Drivers. When you use the Keyboard-Emulation will installed the Standard USB-Driver from windows with the first connection of the device. When you use the COM-PORT-Emulation you should install the Driver from our Homepage.

Link: [http://www.leuze.de/downloads/log/download-02\\_de.html](http://www.leuze.de/downloads/log/download-02_de.html)

### Remark

This Driver must installed one time after the prompt from the operating system ask for this, for this you need Administration-Rights.

The Communication with the Keyboard-Emulation works only in one direction, from the LSIS 123 to the PC. You cannot send Commands form the PC for controlling or using a Softwaretool for configuring the device.

A transmission of Commands to the LSIS 123 is only possible in the COM-Port-Emulation. For this you must changed the configuration against the Factory default.

Necessary for a data transmission is that you use (LSIS122 and LSIS123) the same Communication parameters (Baudrate, Datenbits, Parity; Stopbits, Framingprotokoll)

The setting for this you can do with scanning of parametercodes, which are on part of this document.

The parameterisation of the LSIS 120 can be done one 3 different ways:

1. Reading Barcodes with the LSIS 120, for this you must triggering the device with the integrated Triggerbutton or the Switch input on each Barcode/PDF417-Code.

2. Parameterisation with serial Commandos over the RS232-Interface (LSIS122) or the USB-COM-Port-Emulation (LSIS123).

For this you need a Terminalprogramm (e.g. Hyperterminal; BCL Config Tool, MetroSet...)

The Command order is:

- Enter Configuration Mode
- One or more serial Parameter
- Exit Configuration Mode

More Information you will find in Chapter 6

3. Parameterisation with the PC-Programms Metro Set 2

Over the serial RS232-Interface or the USB-COM-Port-Emulation.

The Program you will find on our Homepage

Link: [http://www.leuze.de/downloads/log/download-02\\_de.html](http://www.leuze.de/downloads/log/download-02_de.html)

#### Remark

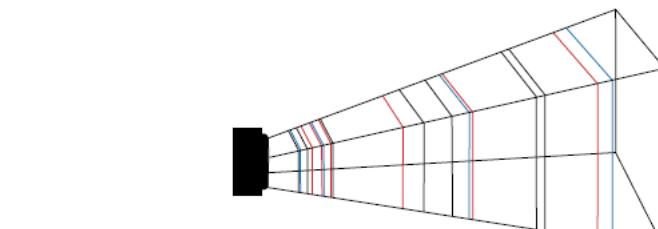

Informations to install and start the Programm Metro Set2, and also chossing the Industrial Scanners IS 4920 you will find in chapter 7.

## 2.3 Connection

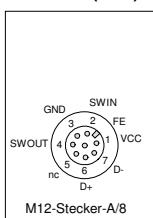

Pin-Out M12-plug (male); 8 pin; A-coded

Connector M12 8-pin.					USB-type			
Pin	signal	direction	voltage	remark	signal	direction	voltage	remark
1	VIN	Input	10..30V		VCC	Input	4,75..5,5V	
2	SWIN	Input	0..VIN		SWIN	Input	0..VCC	
3	GNDIN	Input	0V		GND	Input	0V	
4	SWOUT	Output	0..VIN		SWOUT	Output	0..VCC	
5	nc				nc			
6	RXD232	Input	±6V		D+	I/O	0..VCC	
7	TXD232	Output	±6V		D-	I/O	0..VCC	
8	FE	Input		shield	FE	Input		shield
Gewinde	FE	Input		shield	FE	Input		shield

LSIS 122 (RS232)

LSIS 123 (USB)

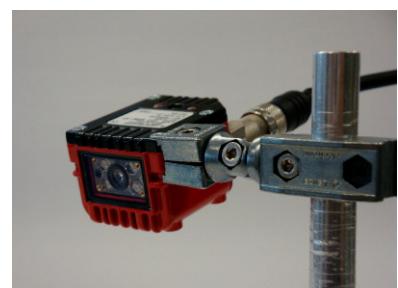

## 2.4 Mounting

With dove tail or M4 holes:

- BT 8 - D10 (50035017) or BT 8 - D12 (50035018) or BT 8 - D14 (50035019)

- UMS 8.2 - D10 (50035026) or UMS 8.2 - D12 (50035027) or UMS 8.2 - D14 (50035028)

You can also use BT 8-0 (50036196) or UMS 8-D1x (50035020 / 50035021 / 50035022) or UMS 8.1-D1x (50035023 / 50035024 / 50035025).

## Enter/Exit Configuration Mode

### 3 Factory Default

#### 3.1 LSIS 122

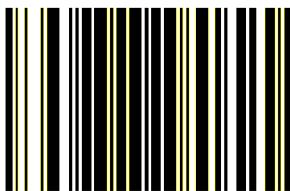

To read the codes, you must activate the Hardwaretrigger (Switch input or triggerbutton), after the reading the illumination stops automatically.

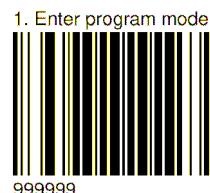

Remark

Transmissionrate: 9600 Baud, 8 Databits, 1 Stopbit, no Parity  
Framingprotocol: <STX> .... <CR><LF>  
No Read Character: <?>  
Trigger: SWIN or serial Command

1. Barcode enter/exit

999980

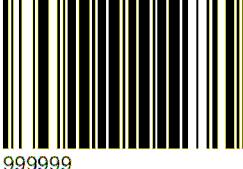

999999

2. Default

3. Configuration LSIS 122  
Factory Default

3. Exit program mode

999999

4. Barcode enter/exit

The factory parameter are marked later on with this sign. (\*)

**Enter/Exit Configuration Mode**

Kurzanleitung LSIS 12x-v171e.doc vom 11/03/2010 Seite 8

3 9 9 9 9 9 9

## 3.2 LSIS 123

### 3.2.1 Keyboard-Emulation (Factory Default)

To read the codes, you must activate the Hardwaretrigger (Switch input or triggerbutton), after the reading the illumination stops automatically.

Remark

Data Transmission: USB-Keyboard-Emulation (German Keyboard-Layout)  
Trigger: Automatically with Presentation Mode

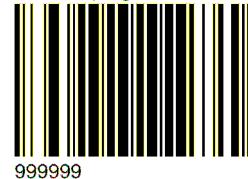

Remark

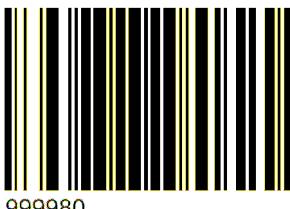

The device uses the Standard Windows Keyboard Driver.

1. Barcode enter/exit

1. Enter program mode

999999

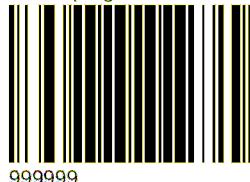

999980

2. Default

3. Configuration LSIS 123  
Factory Default

3. Exit program mode

999999

4. Barcode enter/exit

### 3.2.2 COM-Port-Emulation

To read the codes, you must activate the Hardwaretrigger (Switch input or triggerbutton), after the reading the illumination stops automatically.

**Remark**

Data Transmission: COM-Port-Emulation at Windows PC

Framing protocol: &lt;STX&gt; .... &lt;CR&gt;&lt;LF&gt;

No Read Character: &lt;?&gt;

Trigger: SWIN or serial Command

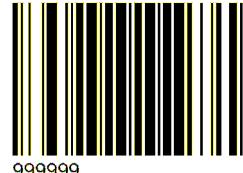

**Remark**

It is necessary to use the USB-COM Port Driver for the LSIS 123 from the Leuze Homepage.

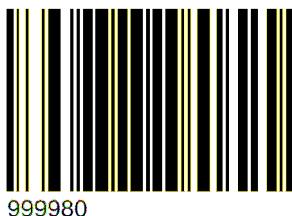

You cannot use several LSIS 123 at one PC !

1. Barcode enter/exit

1. Enter program mode

999999

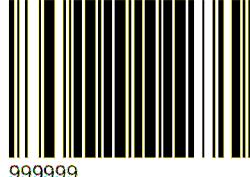

999980

2. Default

3. Configuration LSIS 123  
COM-Port-Emulation

3. Exit program mode

999999

4. Barcode enter/exit

3 9 9 9 9 9 9

## 4 Triggering

There are 3 possibilities to activate the reading (Triggering) at the LSIS 120.

- sending a serial Command
- Hardware input SE or Triggerbutton
- Presentationmode (Automatic reading, if something is in the field of view)

### 4.1 The serial Trigger command

With the factory default of the LSIS 122 or 123 (COM-Port Emulation) you can send the activation with an ASCII-Character. The characters are:

Start reading:	[DC2]	Dec: 18	Hex: 12	Keyboard: CRTL+R
Stop reading :	[DC4]	Dec: 20	Hex: 14	Keyboard: CRTL+T

You have to send only this character, without an framing protocol !

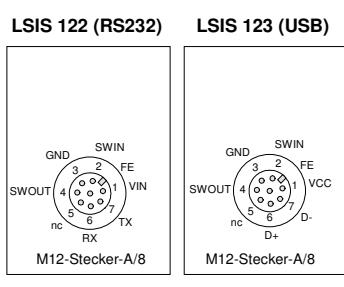

Sending: [DC2]  
Recieving: [STX] Leuze electronic[CR] [LF]

Or when you stop the reading with an NOREAD:

Sending: [DC2]  
.....  
Sending: [DC4]  
Recieving: [STX] ? [CR] [LF]

### 4.2 Hardwaretrigger

With voltage on Pin 2 you can activate the Hardwaretrigger, or you push the Triggerbutton on the device.

Pin	Signal	RS 232	USB
1	VIN	10 ... 30 Volt DC	4,75 ... 5,5 Volt DC
2	SWIN	0 .. VIN	0 .. VCC
3	GNDIN	0 Volt	0 Volt
4	SWOUT	0 .. VIN	0 .. VCC
5	nc		
6	Daten	RXD $\pm$ 10 Volt	D+ 0..VCC
7	Daten	TXD $\pm$ 10 Volt	D- 0..VCC
8	FE	Schirm	Schirm
Gewinde			

Signal (Tx/Rx) at RS 232-Type: min.  $\pm$  10V, no RTS/CTS!

### 4.3 Presentationsmode

With the Presentationmode you can start the reading automatically when something is moving trough the field of view. The illumination of the device starts, and it search for an code. If something can be decoded, this will send over the Interface.

The Barcode to activate this function you can find in Chapter 6.6.2

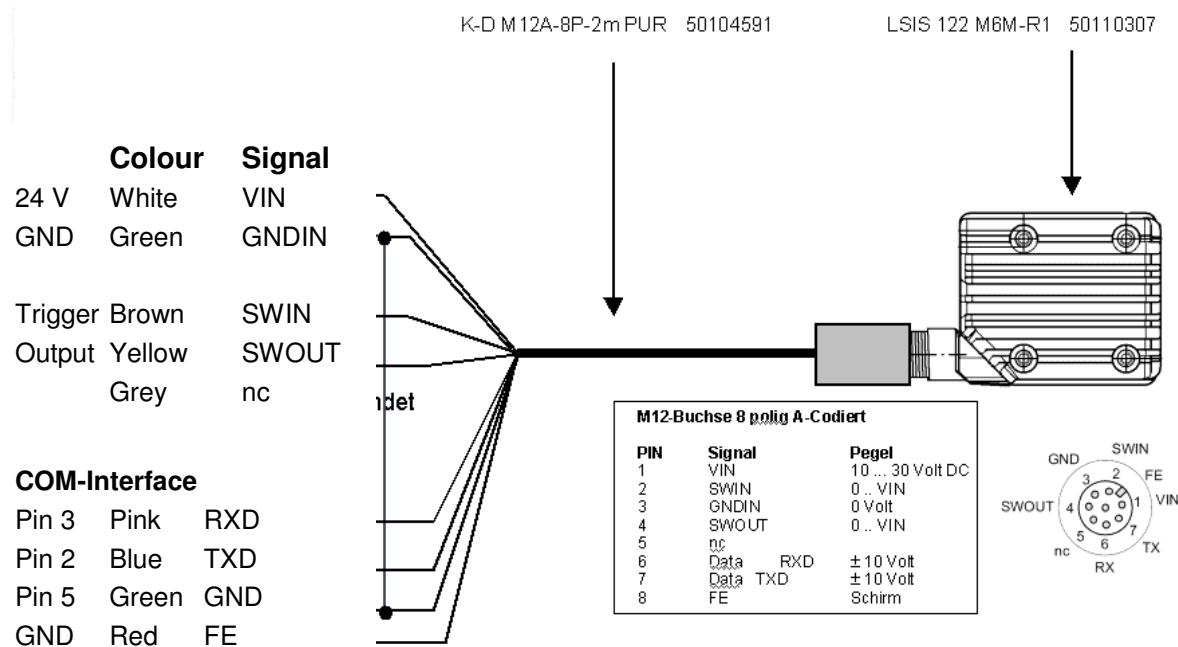

## 5 Connections LSIS 120

### 5.1 LSIS 122

#### 5.1.1 LSIS 122 with open cable end

Parts:

- |             |                    |
|-------------|--------------------|
| 1. 50110307 | LSIS 122 M6M-R1    |
| 2. 50104591 | K-D M12A-8P-2m PUR |

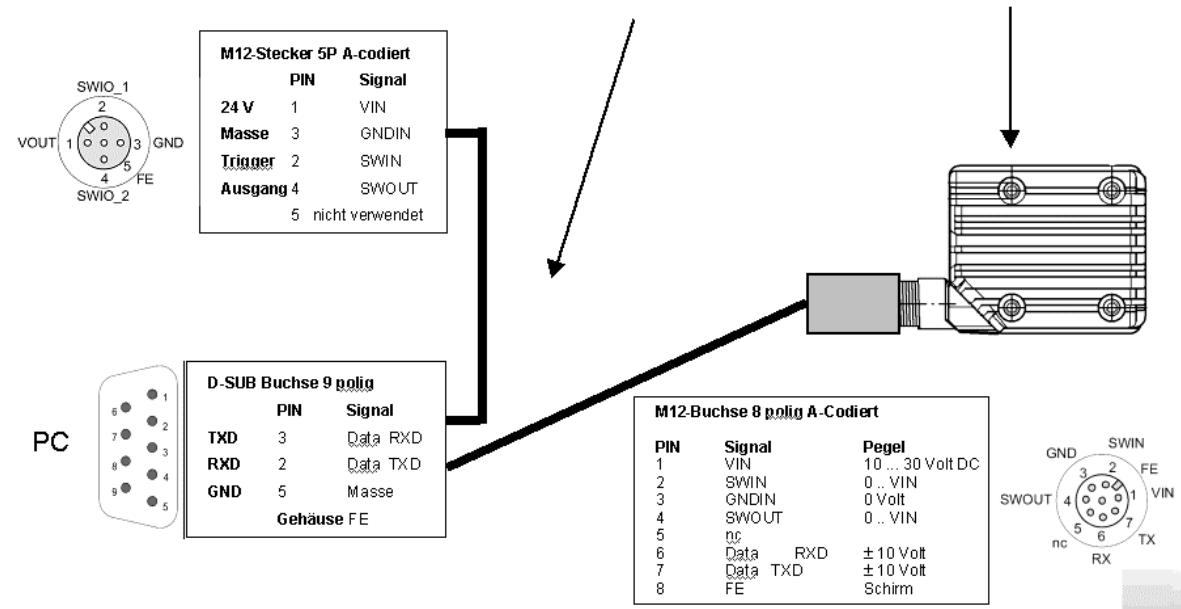

### 5.1.2 LSIS 122 with serial cable (to 9 pin D-Sub Plug)

Parts:

- |                       |                       |
|-----------------------|-----------------------|
| 1. 50110307           | LSIS 122 M6M-R1       |
| 2. 50111226           | KB M12A-8P-PC-IO-3000 |
| option, for powering: |                       |
| 3. 50110650           | KD 01-5-BA-PWR        |
| 4. 50110748           | NT 24-24W             |

The power supply of the BCL 500i Limited Edition can also be used !!

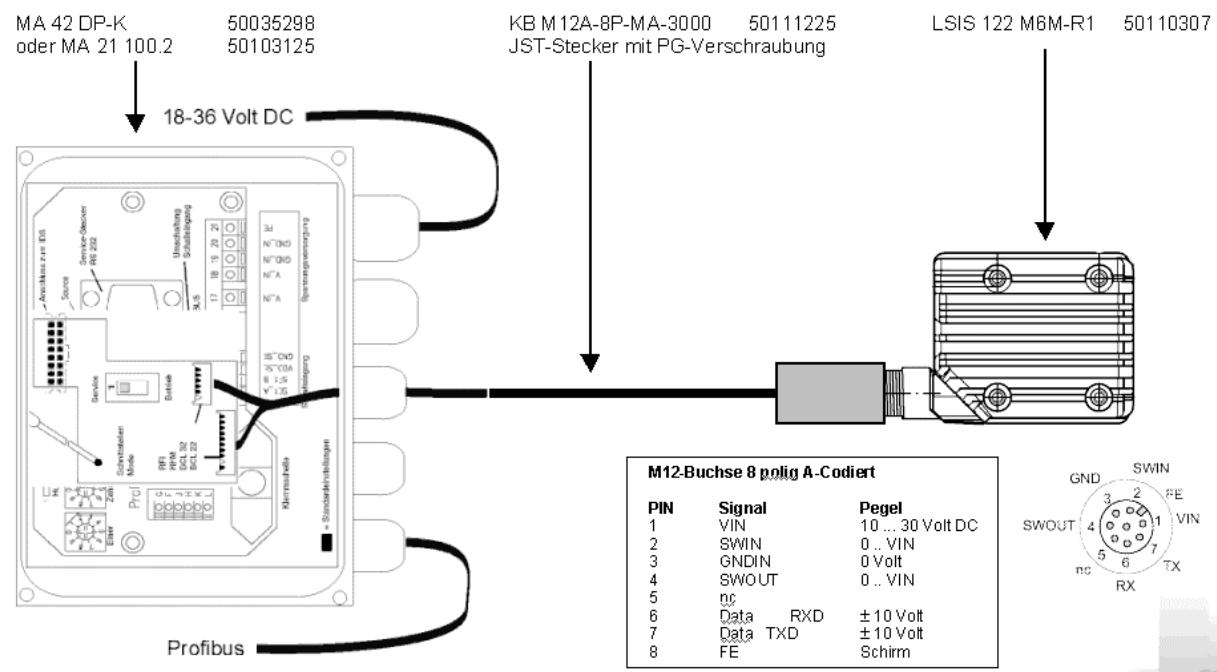

KB M12A-8P-PC-IO-3000 50111226      LSIS 122 M6M-R1 50110307

### 5.1.3 LSIS 122 at MA

Parts:

- |                 |                                  |
|-----------------|----------------------------------|
| 1. 50110307     | LSIS 122 M6M-R1                  |
| 2. 50111225     | K-D M12A-8P-MA-3000              |
| 3. alternative: |                                  |
| • 50035298      | MA 42 DP-K (Profibus-Gateway)    |
| • 50103125      | MA 21 100.2 (multiNet or RS 485) |
| • 50032853      | MA 42 IS (Interbus PCP)          |
| • 50032854      | MA 42 IS (Interbus PDP)          |
| • 50031256      | MA 2 (RS 232-connection box)     |

## 5.2 LSIS 123

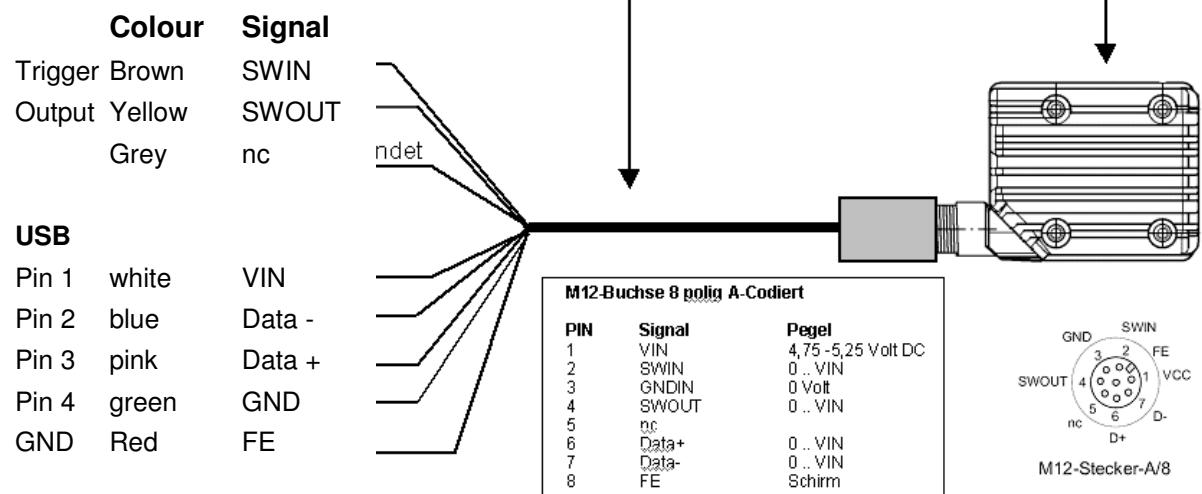

### 1.1.1 LSIS 123 with open cable end

Parts:

- |             |                    |
|-------------|--------------------|
| 1. 50110306 | LSIS 123 M6M-R1    |
| 2. 50104591 | K-D M12A-8P-2m PUR |

K-D M12A-8P-2m PUR 50104591

LSIS 123 M6M-R1 50110306

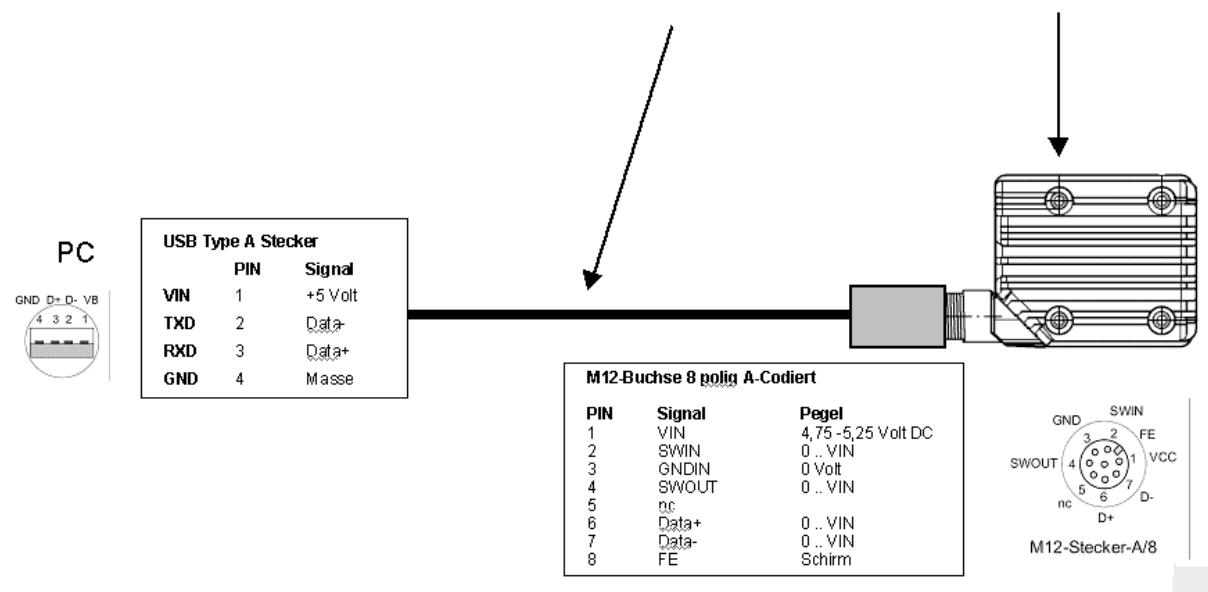

### 1.1.2 LSIS 123 with Conncting cable to an USB Type A-Plug

Parts:

- 1. 50110306 LSIS 123 M6M-R1
- 2. 50111227 KB M12A-8P-USB-3000

KB M12A-8P-USB-3000 50111227

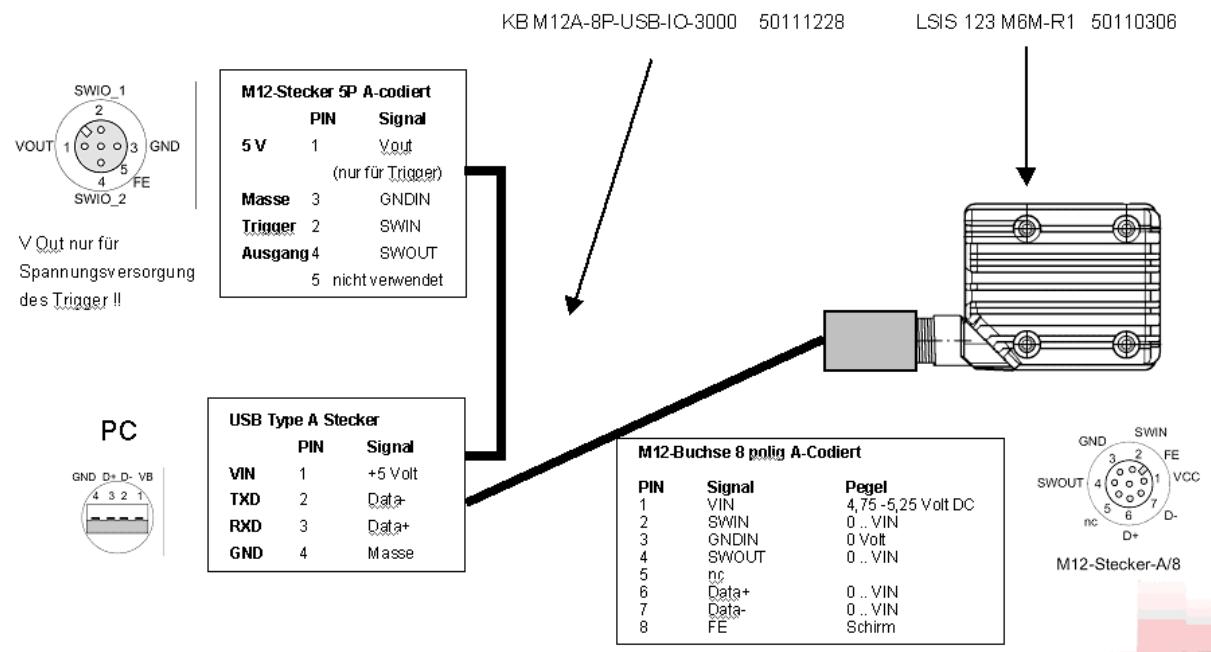

LSIS 123 M6M-R1 50110306

### 1.1.3 LSIS 123 with Conncting cable to an USB Type A-Plug and IO-M12 socket

Parts:

- |             |                        |
|-------------|------------------------|
| 1. 50110306 | LSIS 123 M6M-R1        |
| 2. 50111228 | KB M12A-8P-USB-IO-3000 |

It is not allowed to power at the M12 connector 5-pin !  
The voltage supply comes every time from the PC. The Pin 1 is only a output and you should not need more than 100 mA.

## 6 Configuration with Barcode or serial Commands

### 6.1 Configuration with reading Barcodes

To open or close the configuration mode it is necessary to read the Barcode 'Enter/Exit Configuration Mode'. The Codeinformation is 999999 for both.

You can disclaim the reading of the Barcode Enter/Exit Configuration Mode, when you not have Multi-Code Configuration.

Remark

The Multi-Code Configuration is with marked with a Tilde (~).

The Parameter from the Factory Default is marked with an asterisk (\*).

Remark

The activation of addtional Barcodetypes and Functions affected the Decoding-/Readingspeed !

Remark

### 6.2 Configuration Commands

To do the configuration, you have to send a command to open and to close it.

The Start or End - string ist 999999.

It is the same when you want to programm the device with barcodes. You must read the Code Enter program mode and at the end Exit programm mode.

With the factory default of the LSIS 122/123 (COM-Port Emulation) you can setup the device also with ASCII-Strings. You have to use the framing with STX and ETX when you will send this:

Prefix: [STX] Hex: 02 Keyboard: Alt+002  
Postfix: [ETX] Hex: 03 Keyboard: Alt+003

The LSIS 120 answer after each command with ACK or NAK (without framing) .

Command OK: [ACK] Hex: 06 Keyboard: Alt+006

Command Not OK: [NAK] Hex: 15 Keyboard: Alt+021

### 6.3 Example EAN13 deactivate:

Sending: [STX]999999[ETX]  
Recieving: [ACK]  
Sending: [STX]100201[ETX]  
Recieving: [ACK]  
Sending: [STX]999999[ETX]  
Recieving: [ACK]

1. Enter Configuration

Enter/Exit Configuration Mode

(Necessary when you do a Multi-Code configuration (~), if not you can disclaim it !)

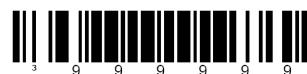

2. Configurations code (s)

3. Exit Configuration

Enter/Exit Configuration Mode

(Necessary when you do a Multi-Code configuration (~), if not you can disclaim it !)

Enter/Exit Configuration Mode

Kurzanleitung LSIS 12x-v171e.doc vom 11/03/2010 Seite 18

## 6.4 Data transmission RS 232 (LSIS 122)

Here you can find the Parameter for the serial communication of the LSIS 122.

For the Definition of the data transmission over the RS 232-Interface you need the Parameter: Baudrate, Databit, Stopbit, Parity and the framing protocol. Please configure the same parameter on the PC/PLC/... as in the LSIS 122.

### 6.4.1 Baudrate

115200 Baud

57600 Baud

38400 Baud

19600 Baud

9600 Baud (\*)

4800 baud

2400 baud

1200 baud

#### 6.4.2 Data-/Stopbits

8 Datenbits (\*)

7 Datenbits

1 Stopbit

2 Stopbit

#### 6.4.3 Parity

No Parity (\*)

Even Parity

Odd Parity

Parity Mark

Parity Space

#### Enter/Exit Configuration Mode

#### 6.4.4 Software Handshaking XON/XOFF

If you want to use the Software Handshake XON/XOFF, you must activate it.

XON:	[DC3]	19d oder 13h	Tastatureingabe: Alt+019
XOFF:	[DC1]	17d oder 11h	Tastatureingabe: Alt+017

##### 6.4.4.1 Activation of XON/XOFF

Sending: [STX]999999[ETX]  
Recieving: [ACK]  
Sending: [STX]115914[ETX]  
Recieving: [ACK]  
Sending: [STX]999999[ETX]  
Recieving: [ACK]

Enable XON/XOFF

##### 6.4.4.2 Example with XON/XOFF:

Sending: [DC3]  
Recieving: *Data transmission stopped*  
Reading of an Barcoe with the content '5411153002431'  
Triggering with the serial Command DC2 or Hardwaretrigger  
Sending: [DC1]  
Recieving: [STX] 5411153002431[CR] [LF]

##### 6.4.4.3 Deactivation of XON/XOFF

Sending: [STX]999999[ETX]  
Recieving: [ACK]  
Sending: [STX]115904[ETX]  
Recieving: [ACK]  
Sending: [STX]999999[ETX]  
Recieving: [ACK]

Disable XON/XOFF (\*)

#### 6.4.5 Framing protocol (Prefix/Suffix)

With Framing protocol is the discribed the Start and End characters, the characters before the Codeinformation and after Codeinformation. They are also called Prefix or Header for the Startcharacter. For the End character Postfix or Suffix or Terminator.

##### 6.4.5.1 Prefix STX

**Activation**  
Enable STX (\*)  
(serial Command: 116615)

##### 6.4.5.2 Suffix CR

**Activation**  
Enable CR (\*)  
(serial Command: 116613)

##### 6.4.5.3 Suffix LF

**Activation**  
Enable LF (\*)  
(serial Command: 116612)

##### 6.4.5.4 Suffix ETX

**Activation**  
Enable ETX (\*)  
(serial Command: 116614)

**Deactivation**  
Disable ETX  
(serial Command: 116604)

## 6.5 Data transmission USB (LSIS 123)

Here you can find the Parameter for the serial communication of the LSIS 123.  
For the Definition of the data transmission over the USB -Interface you have to activate this  
and to install an driver on the Windows PC.  
You can emulate a serial Interface or an Keyboard-Interface.  
The Functionality is depending on the Operation System of the Hostsystem.

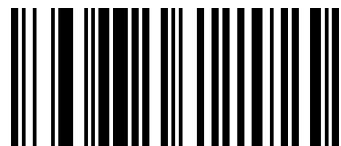

### 6.5.1 Activation of the USB-Interface

Enable USB Interface (FullSpeed)

(\*)

4155124

316400

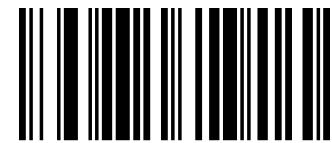

Enable Keyboard - Emulation

(\*)

316470

Enable Bi - Directional COM-Port  
(serial Trigger possible)

316460

Enable Uni - Directional COM-Port  
(NO serial Trigger possible)

## 6.6 Triggermode

### 6.6.1 Triggermode (Multi-Try Trigger)

Enable Multi-Try Triggermode (\*)  
(serial Command: 418324).

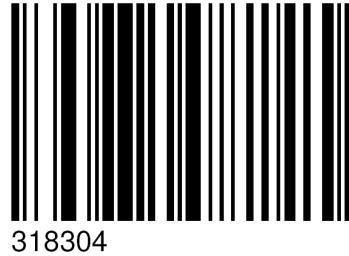

### 6.6.2 Presentationmode

Automatic activation of the reading, if something is moving through the field of view..

You must activate for each Configuration-Code the Hardwaretrigger (Switch Input or Triggerbutton), after the reading of the code the Illumination Lights switch off automatically.

1. Enable Presentationmode  
(serial Command: 318304).

2. Enable wake-up Presentation  
(serial Command: 143610).

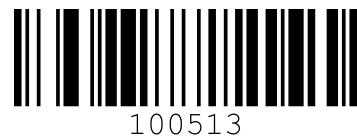

## 6.7 Data Matrix Code ECC200

### 6.7.1 Activation Normal Data Matrix Code

(black cells on white background)

Enable Normal Video Data Matrix (\*)  
(serial Command: 100513).

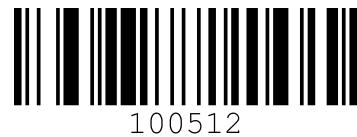

### 6.7.2 Activation Inverse Data Matrix Code

(white cells on black background)

Enable Inverse Video Data Matrix  
(serial Command: 100512).

### 6.7.3 Activation Normal and Inverse Data Matrix Code

black cells on white background and white cells on black background

Enable Normal and Inverse Video Data Matrix  
(serial Command: 200532).

### 6.7.4 Data Matrix Code Deactivation

Disable Data Matrix Codereading

Disable Data Matrix  
(serial Command: 200502).

## 6.7.5 Data Matrix Code Low-Contrast

### 6.7.5.1 Activation of low contrast Data Matrix Codereading

Enable Low contrast Data Matrix Code  
(serial Command: 125417).

125417

### 6.7.5.2 Disactivation of low contrast Data Matrix

Disable Low contrast Data Matrix Code (\*)  
(serial Command: 125407).

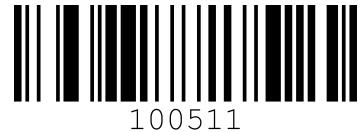

125407

## 6.7.6 Rectangular Data Matrix Code

### 6.7.6.1 Activation of Rectangular Data Matrix Codereading

Enable rectangular Data Matrix Code  
(serial Command: 100511).

100511

### 6.7.6.2 Disactivation of Rectangular Data Matrix Codereading

Disable rectangular Data Matrix Code (\*)  
(serial Command: 100501).

100501

### 6.7.7 Non square Cells in the Data Matrix Code

#### 6.7.7.1 Activation Non square Cells in the Data Matrix Code

Enable non-square Data Matrix Codes  
(serial Command: 125416).

125416

#### 6.7.7.2 Disactivation Non square Cells in the Data Matrix Code

Disable non-square Data Matrix Codes (\*)  
(serial Command: 125406).

125406

### 6.7.8 Cell size in the Data Matrix Code

#### 6.7.8.1 Activation of small Cells in the Data Matrix

Enable small Cells in the Data Matrix Code  
(serial Command: 325412).

325412

#### 6.7.8.2 Activation of very small Cells in the Data Matrix

Enable sehr kleine Zellengrößen beim  
Data Matrix Code  
(serial Command: 325422).

325422

#### 6.7.8.3 Activation of normal Cell sizes in the Data Matrix

Enable normal Cell sizes in the Data Matrix  
Code (\*)  
(serial Command: 325402).

325402

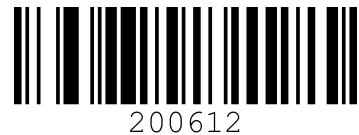

## 6.8 QR-Code

### 6.8.1 Activation Normal QR-Code

(black cells on white background)

Enable Normal Video QR-Code  
(serial Command: 200612).

### 6.8.2 Activation Inverse QR-Code

(white cells on black background)

Enable Inverse Video QR-Code  
(serial Command: 200622).

### 6.8.3 Activation Normal and Inverser QR-Code

black cells on white background and white cells on black background

Enable Normal und Inverse Video  
QR-Code  
(serial Command: 200632).

### 6.8.4 QR-Code Deactivation

Disable QR-Codereading

Disable QR-Code (\*)  
(serial Command: 200602).

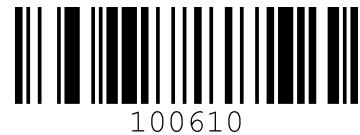

## 6.9 Aztec Code

### 6.9.1 Activation Normal Aztec-Code

(black cells on white background)

Enable Normal Video Aztec-Code  
(serial Command: 100610).

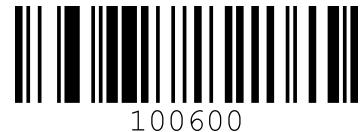

### 6.9.2 Normal Aztec-Code Deactivation

Disable Aztec-Codereading (black on white)

Disable Normal Video Aztec-Code (\*)  
(serial Command: 100600).

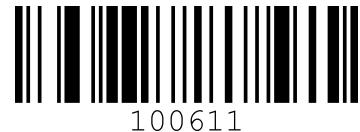

### 6.9.3 Activation Inverse Aztec-Code

(white cells on black background)

Disable Normal Video Aztec-Code (\*)  
(serial Command: 100611).

### 6.9.4 Deactivation Inverse Aztec Code

Disable Aztec-Codereading (white on black)

Disable inverse Video Aztec-Code (\*)  
(serial Command: 100601).

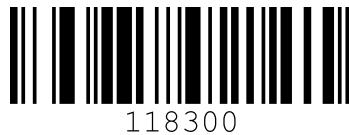

## 6.10 Switch Output

Enable **NO** Switch output after Noread (\*)  
(serial Command: 118311).

**Always** Switchoutput (green LED)  
after Decoding  
(serial Command: 118301).

**Never** Switchoutput (green LED)  
after Decoding  
(serial Command: 118300)

## 6.11 Sleep Mode Timeout

This Parameter have influence on the Data Transmission of the LSIS 120.  
If the this value is greater-than-or-equal 1 sec, is no serial Data Transmission of Commands  
to the LSIS 122 possible. This is only working with the value 0.  
The Parameter 'Sleep Mode timeout' has no influence on the data communiction on the LSIS  
123.

Sleep Timeout 0 Seconds (\*)  
(serial Command: 819500).

Sleep Timeout 1 Second  
(serial Command: 119510).

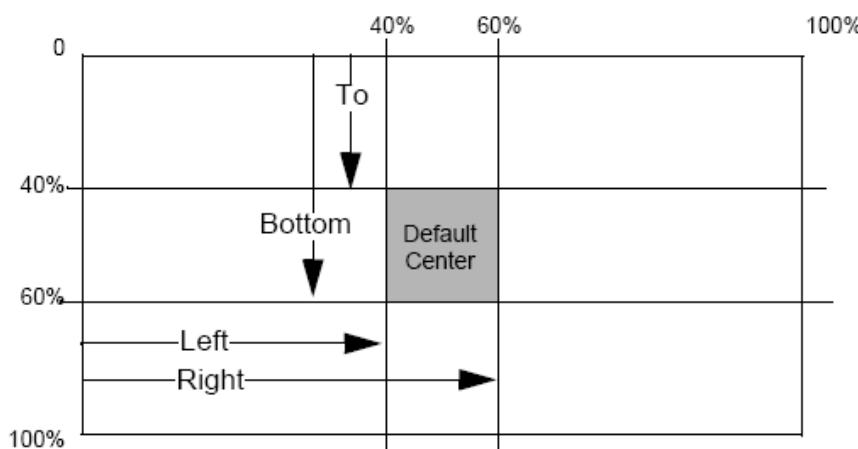

The setting after 'Recall Defaults' is 1 Second. It is than necessary to activate  
the Hardwaretrigger when you want sent Commands to the LSIS 122 or you  
want work with the Programm MetroSet.

## 6.12 Function Centering

Centering window is used to narrow the field of view to make sure the imager reads only those bar codes intended by the user. For instance, if multiple codes are placed closely together, centering will insure that only the desired codes are read.

The centering window is specified as a percentage of the whole image. The default centering window is 40% for top and left, 60% for bottom and right. The following diagram illustrates the default top, bottom, left, and right pixel positions, measured from the top and the left side of the whole image.

### 6.12.1 Configuration Centering Function

To change the centering window, use the multi-code method:

1. Scan Enter/Exit Program Mode (999999).
2. Scan the desired window offset programming barcode on the next page.
3. Scan the Codes for die Centering directions (left, right, top, bottom), see next page
4. Scan three of the code byte barcodes, representing the decimal value you want for the window offset
5. Repeat steps 3 and 4 for other offsets.
6. Scan Enter/Exit Program Mode (999999) again.

Overview:

Command	Description	Default	Setup-Tool	Chapter
999999	Start and End Configuration			footer
243220	Centering On	NO	NO	6.12.2
9423	Centering Left	NO	NO	6.12.3
9425	Centering Right	NO	NO	6.12.3
9424	Centering Top	NO	NO	6.12.3
9426	Centering Bottom	NO	NO	6.12.3
After this you must send each time the start and stop values				
0	0 %	NO	NO	6.13
0		NO	NO	6.13
0		NO	NO	6.13
1	100%	NO	NO	6.13
0		NO	NO	6.13
0		NO	NO	6.13
999999	Start and End Configuration			footer

## 7 The Program MetroSet

### 7.1 Configuration with the Program MetroSet

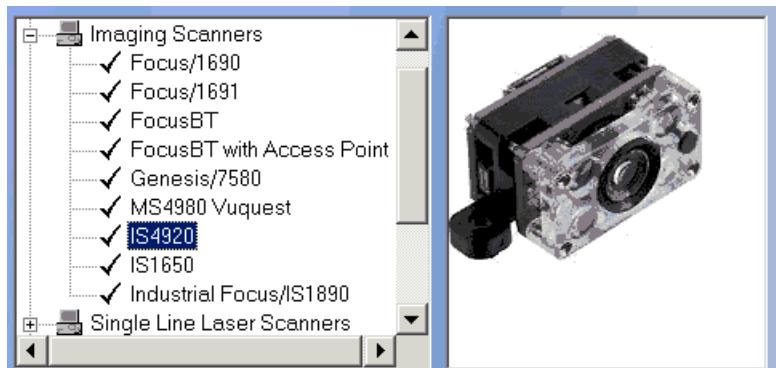

You can also use the Program MetroSet for setup the LSIS 120. The program you can find on [www.leuze.de](http://www.leuze.de).

1. After Installation of the exe-File, you can start the program with the Link in Start or with

the Icon  MetroSet 2 on the Desktop.

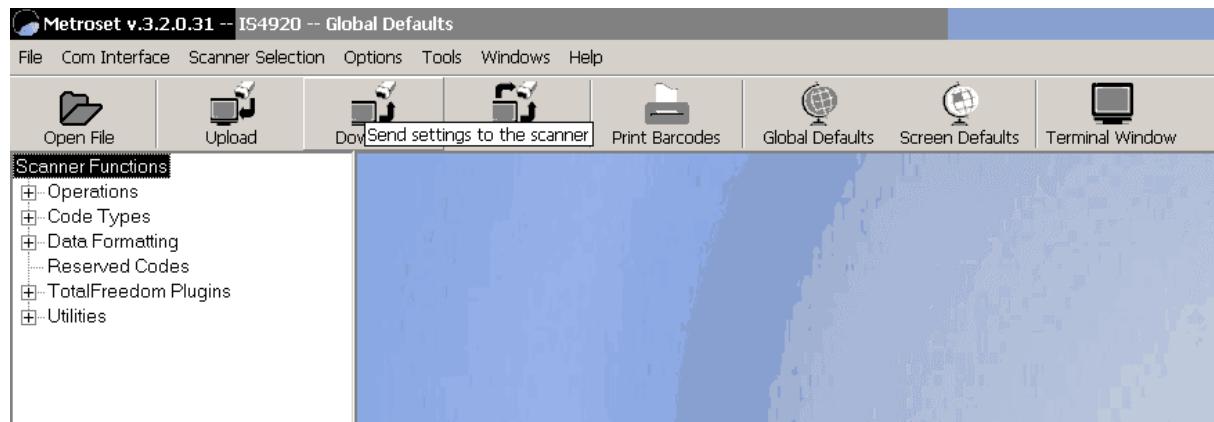

2. To use the Configuration of the LSIS 120, you have to choose the IS 4920 under the Imaging Scanners.

3. Click on the  at Imaging Scanners Scanners<sup>1</sup> and then on the IS 4920

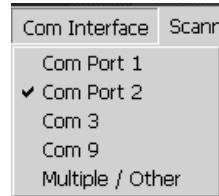

4. Click on the  Configure IS4920 Scanner to load the Parameters.

5. It appears the following window:

6. When you start the first time, you have to choice the Interface which you have connected the LSIS 120. With LSIS 122 is this normaly the COM-Port of the PC's. Please take care that you use the COM-Port Emulation at the LSIS 123, and the driver is installed and works, only in this mode you can work with it. Maybe you need Administration rights for this

7. Choose the right COM-Port of the available Interfaces.

<sup>1</sup> Depending on the Program version the **IS 4920** can also be on another place in the list.

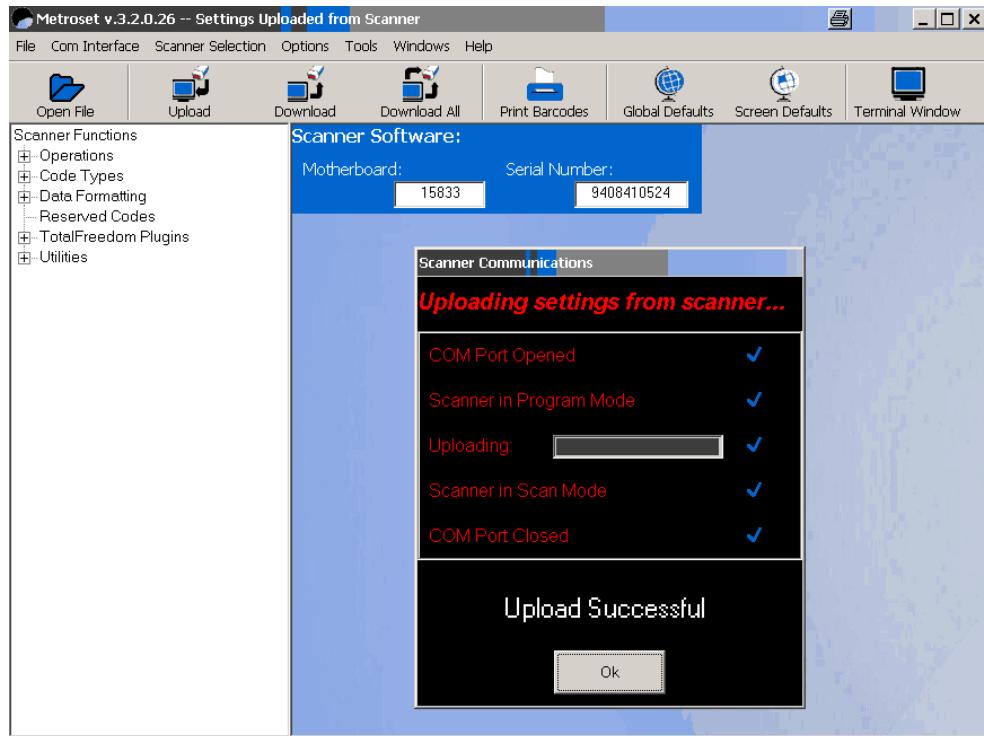

8. To have the datas from the LSIS 120 in the Program MetroSet, click on Upload. The datas will be transmitted

9. Confirm the Upload warning with OK.

10. When the following window appears, all datas are transmitted

11. Click on OK..

12. Now you can choose on the right side the Parameter and configure it..

13. After changing a Parameter and closing the window, the parameter value will be stored in the Program. To store it in the LSIS 120 you have to click to Download.

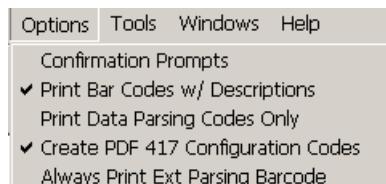

14. Confirm the download warning with OK.

15. Click on OK. The Parameter values are now stored in the LSIS 120.

16. If you want to print the configuration to store it, click on the button Print barcodes.

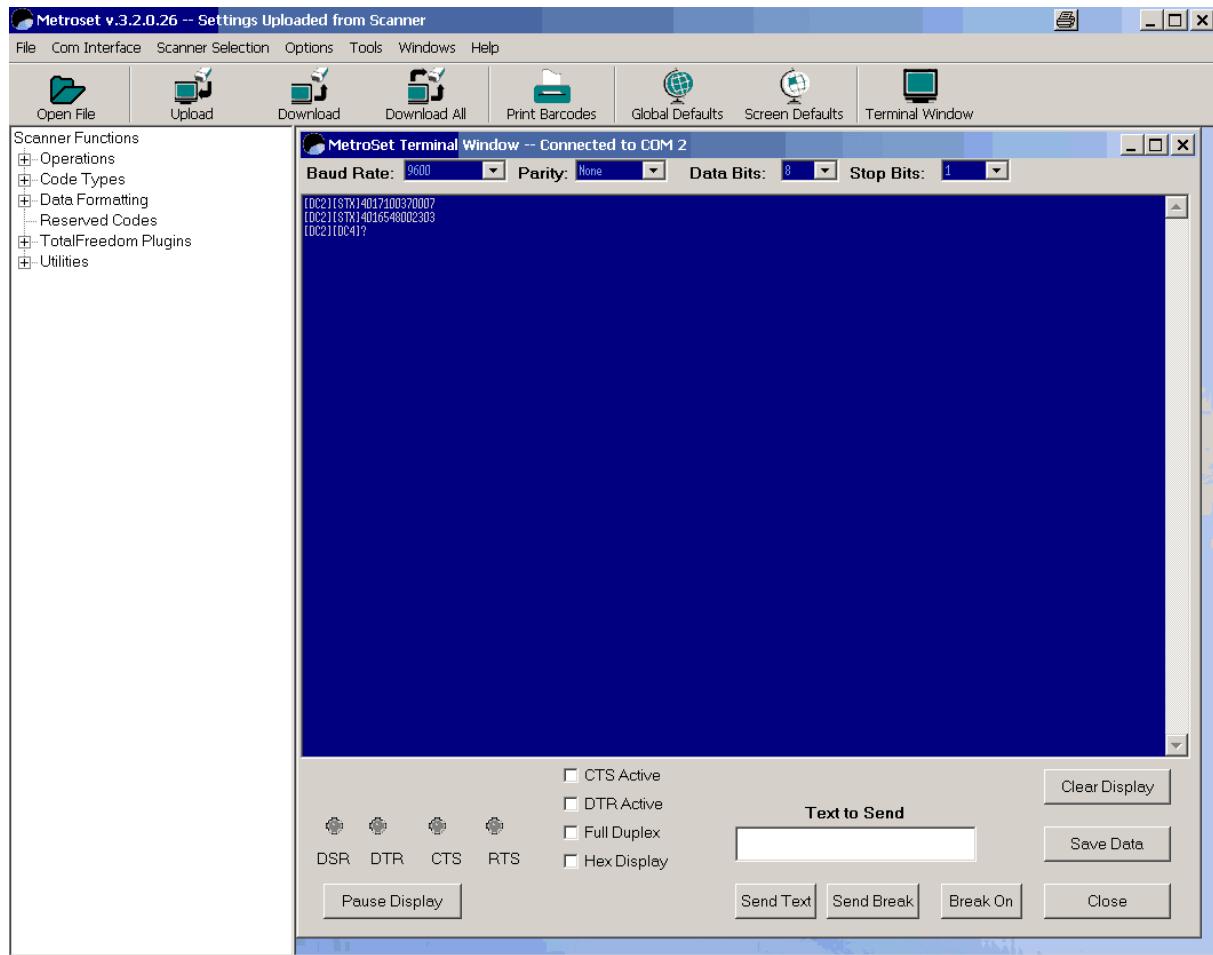

To print it as one PDF417-code instead of several Barcodes, check if the function is activated.

## 7.2 Function control with the Program MetroSet

With the Terminal Window you can check the Data transmission and readability of the Codes.

You can trigger the LSIS 120, when you click on the blue Background of the Terminal Window and type Crtl+R. You send than

[DC2]

and it will shows you in the Terminal Window.

After reading of an Code it shows you

[STX]DATA

a NoRead will displayed with an ? .
